

Discover our CLOUD MIGRATION SERVICES

MODERNIZE WHILE YOU MIGRATE

Move your mailboxes and resources from on-premises servers to a Cloud environment so you can focus on what's most important.

We can support you with four types of migration:

1

Hybrid Migrations

Move some data to an on-premises Exchange server, while the rest is transferred to Office 365. The level of complexity is high, and the duration of the migration can span weeks to months, depending on your specific business needs.

2

PST Migrations

Manually exporting mailboxes directly from a user's computer and importing them to Office 365. This migration is high in complexity and time-consuming.

3

Application Assisted Migration

In this scenario, third-party tools like BitTitan are used to help execute a migration. The use of third-party tools becomes necessary in extremely complex scenarios, such as migrating from Lotus to Office 365. This migration is high in complexity but with a low time consumption.

4

Standard Migrations

Easy, lightweight migrations, with normal complexity. Examples: G-Suite migrations (hybrid), or IMAP/POP3 migrations (a .PST migration might be necessary).
